LONE PINE FENCING
2018

To Discuss

- Recap on company core values
- In the Spotlight – Turfing
- Company Photos
- Mid Year (Christmas In July) Day

Stolen quote of the month

Tell me and I forget, teach me and I remember,
involve me and I learn.

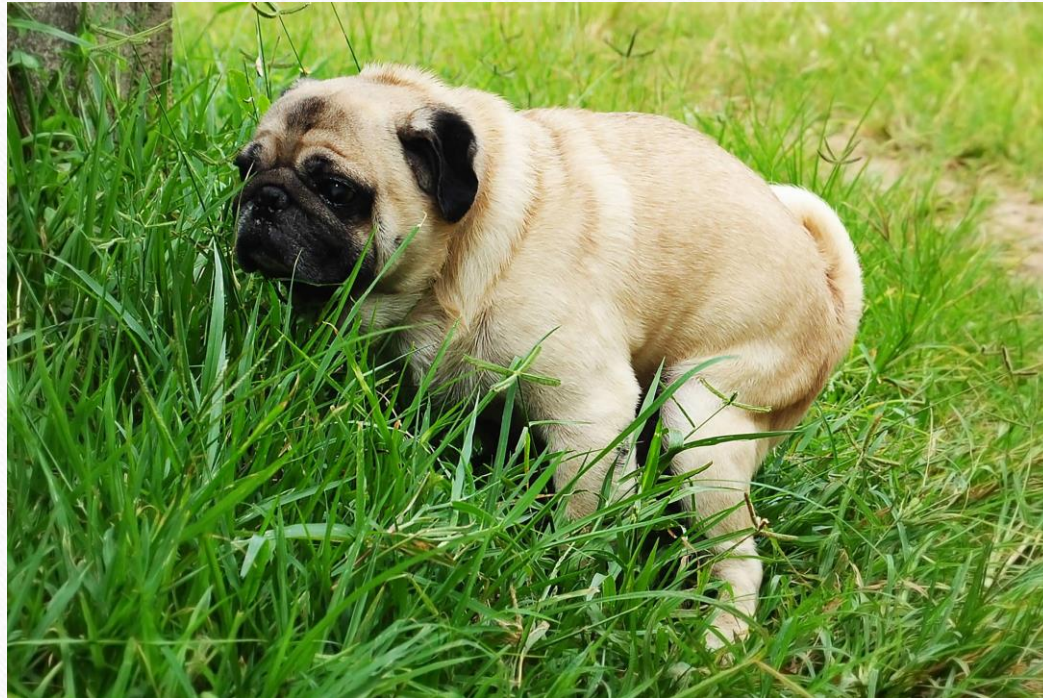

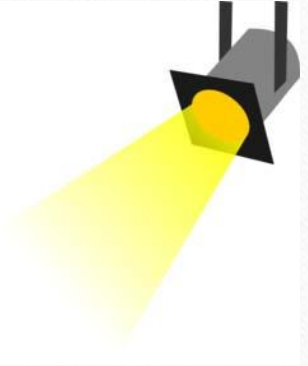

~~Benjamin Franklin~~

RE CAP ON COMPANY CORE VALUES

- **Quality** – workmanship, professionalism, attention to detail
- **Customer service** – The customers experience with our firm
- **Safety** – Safe practice of tools, PPE, the safety of clients, public, staff and the overall work site.
- **Protocol** – following company systems, polices and procedures diligently and thoroughly.

IN THE SPOTLIGHT **TURFING**

Turfing – 5 steps for laying turf well!

- 1- Prep is everything
- 2- Borders first
- 3- Lay for water flow and stagger lines
- 4- Blow off excess
- 5- Roll & Water in

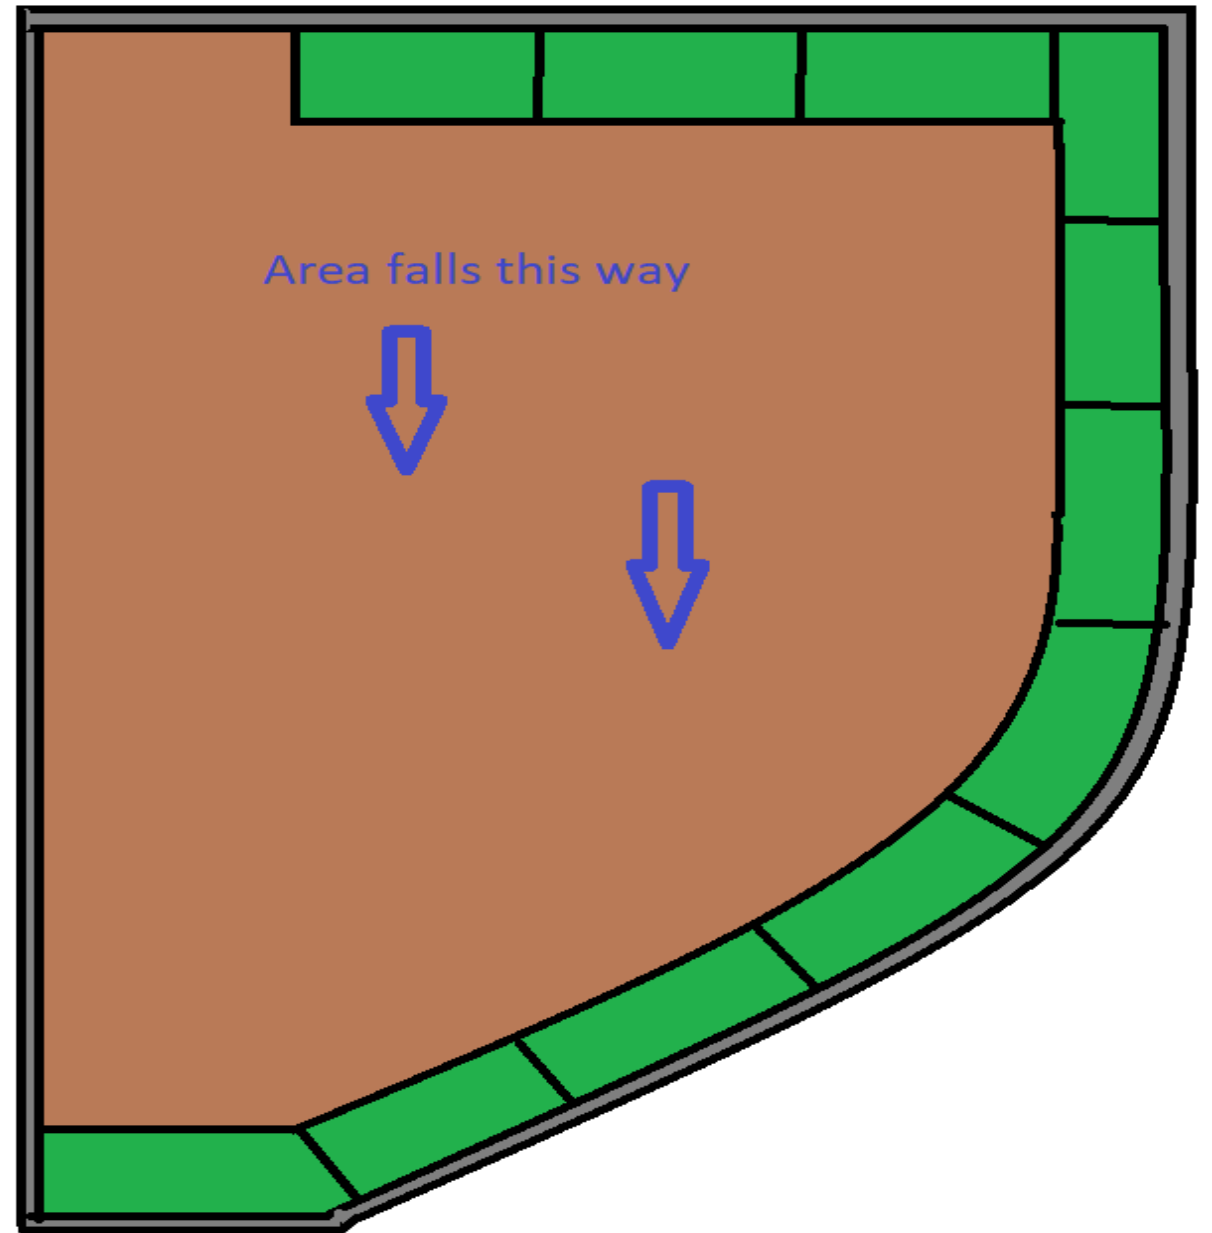

PREP

Prep is everything !

- Make sure the area has 75mm minimum turf underlay coverage
- Remove all debris (pebbles, rocks, roots etc)
- Check prep has fall and Ag pipes are installed where need running into a pit
- If its Clay – Add Gypsum
- Make sure its level

Borders and Set out

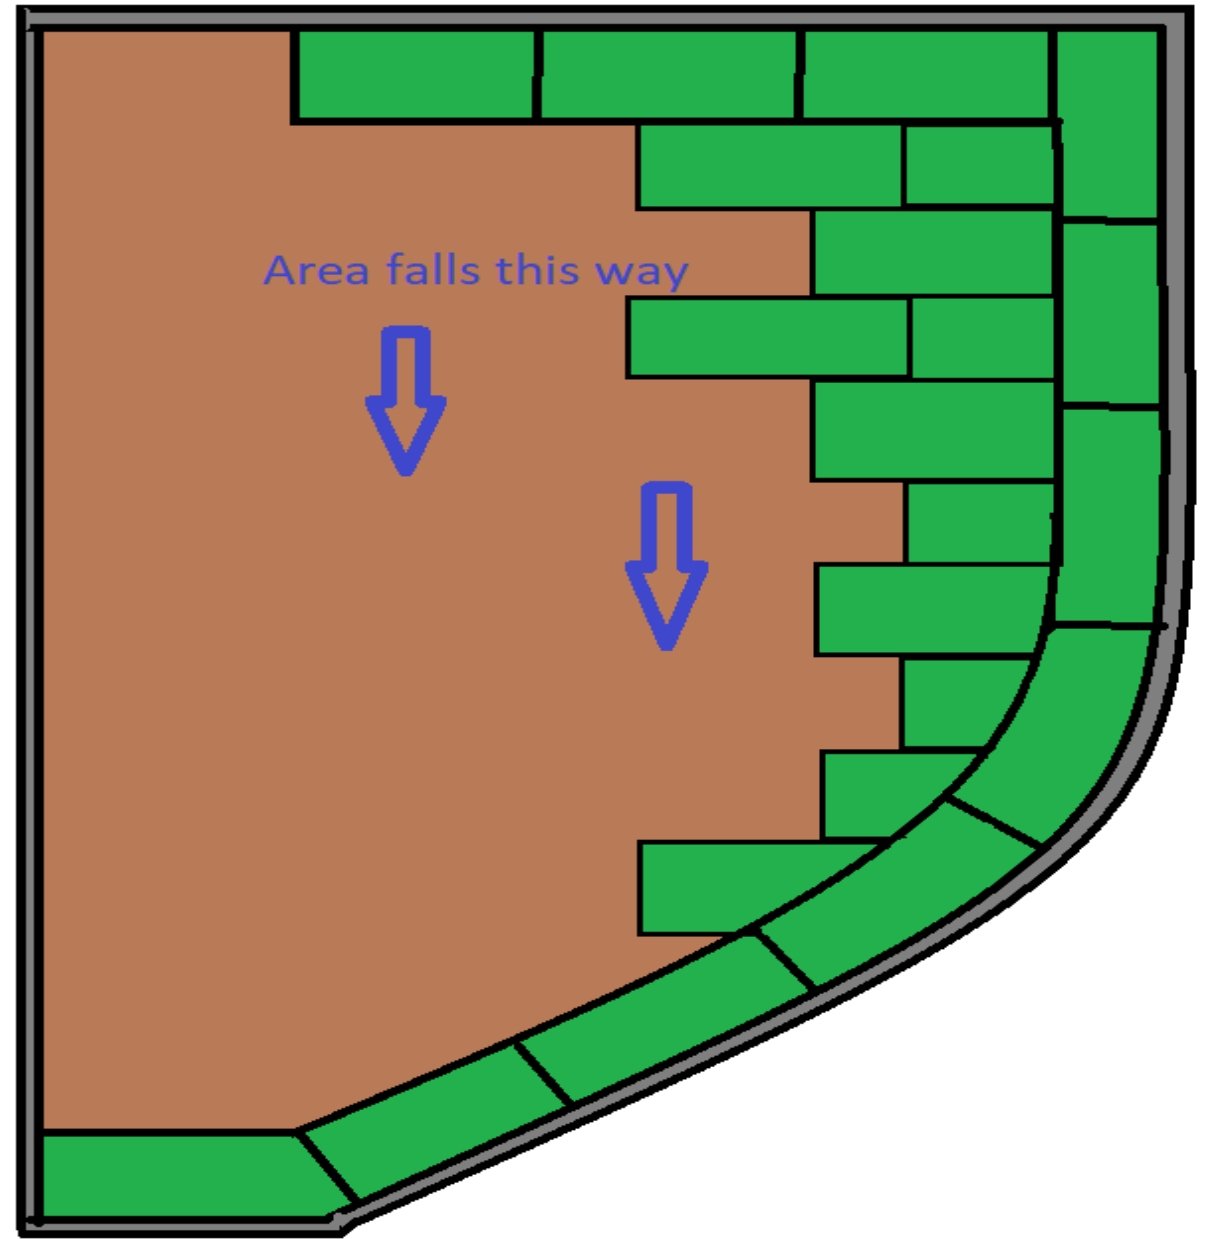

Always lay the border first so the lawn can be cut into this.

Boarders and Set out

Once boarder is laid, find the way that water will fall, and make sure you lay across it not with it.

This will prevent water from using the turf joins as channels and eroding soil.

Blow and Rake Excess

Hose Then Roll the lawn.

Importance of rolling a lawn

Once the lawn is watered in, rolling it allows the turf roll to connect to the soil like a boot stuck in wet mud, it creates a suction.

The small white fibrous hairs that initially grow and grab the soil will die off if they grow into air pockets (this is caused by poor soil and turf connection) this will intern leave browning on the new lawn.

Thanks and Goodbye
